Systems Architecture Documentation

The "Crosswalk" Pipeline: Conceptual architecture demonstrating how fragmented university admissions systems are unified into a cohesive, relational institutional dashboard for the International Office.

Architectural Highlights:

- **The Crosswalk Pipeline:** Bypasses legacy system constraints by extracting raw CSV data from siloed portals and deduplicating it using custom matching logic (Passport, Email, Name+DOB).
- **The Golden Record:** Secures data integrity by stripping volatile metrics and anchoring the student to a permanent, meaningless Internal UID.
- **Proactive Compliance:** The relational model automatically tracks complex edge cases ensuring 100% compliance with Indonesian Immigration (ITAS) regulations.
